

Coronavirus Disease 2019 (COVID-19)

Interim Guidance for Businesses and Employers

Plan, Prepare and Respond to Coronavirus Disease 2019

This interim guidance is based on what is currently known about the coronavirus disease 2019 (COVID-19). The Centers for Disease Control and Prevention (CDC) will update this interim guidance as needed and as additional information becomes available.

CDC is working across the Department of Health and Human Services and across the U.S. government in the public health response to COVID-19. Much is unknown about how the virus that causes COVID-19 spreads. Current knowledge is largely based on what is known about similar coronaviruses.

CDC Public and Private Partner Call for COVID-19 — March 4, 2020

Dr. Jay Butler, CDC's Deputy Director for Infectious Diseases and Senior Response Official for the COVID-19 response provided a situational update for CDC partners, including members of the private sector, public health organizations, universities, and clinical societies.

Coronaviruses are a large family of viruses that are common in humans and many different species of animals, including camels, cattle, cats, and bats. Rarely, animal coronaviruses can infect people and then spread between people, such as with MERS-CoV and SARS-CoV. The virus that causes COVID-19 is spreading from person-to-person in China and some limited person-to-person transmission has been reported in countries outside China, including the United States. However, respiratory illnesses like seasonal influenza, are currently widespread in many US communities.

The following interim guidance may help prevent workplace exposures to acute respiratory illnesses, including COVID-19, in non-healthcare settings. The guidance also provides planning considerations if there are more widespread, community outbreaks of COVID-19.

To prevent stigma and discrimination in the workplace, use only the guidance described below to determine risk of COVID-19. Do not make determinations of risk based on race or country of origin, and be sure to maintain confidentiality of people with confirmed COVID-19. There is much more to learn about the transmissibility, severity, and other features of COVID-19 and investigations are ongoing. Updates are available on CDC's web page at www.cdc.gov/coronavirus/covid19.

Recommended strategies for employers to use now:

- **Actively encourage sick employees to stay home:**
 - Employees who have symptoms of acute respiratory illness are recommended to stay home and not come to work until they are free of fever (100.4° F [37.8° C] or greater using an oral thermometer), signs of a fever, and any other symptoms for at least 24 hours, without the use of fever-reducing or other symptom-altering medicines (e.g. cough suppressants). Employees should notify their supervisor and stay home if they are sick.
 - Ensure that your sick leave policies are flexible and consistent with public health guidance and that employees

are aware of these policies.

- Talk with companies that provide your business with contract or temporary employees about the importance of sick employees staying home and encourage them to develop non-punitive leave policies.
 - Do not require a healthcare provider's note for employees who are sick with acute respiratory illness to validate their illness or to return to work, as healthcare provider offices and medical facilities may be extremely busy and not able to provide such documentation in a timely way.
 - Employers should maintain flexible policies that permit employees to stay home to care for a sick family member. Employers should be aware that more employees may need to stay at home to care for sick children or other sick family members than is usual.
- **Separate sick employees:**
 - CDC recommends that employees who appear to have acute respiratory illness symptoms (i.e. cough, shortness of breath) upon arrival to work or become sick during the day should be separated from other employees and be sent home immediately. Sick employees should cover their noses and mouths with a tissue when coughing or sneezing (or an elbow or shoulder if no tissue is available).
- **Emphasize staying home when sick, respiratory etiquette and hand hygiene by all employees:**
 - Place posters that encourage staying home when sick, cough and sneeze etiquette, and hand hygiene at the entrance to your workplace and in other workplace areas where they are likely to be seen.
 - Provide tissues and no-touch disposal receptacles for use by employees.
 - Instruct employees to clean their hands often with an alcohol-based hand sanitizer that contains at least 60-95% alcohol, or wash their hands with soap and water for at least 20 seconds. Soap and water should be used preferentially if hands are visibly dirty.
 - Provide soap and water and alcohol-based hand rubs in the workplace. Ensure that adequate supplies are maintained. Place hand rubs in multiple locations or in conference rooms to encourage hand hygiene.
 - Visit the coughing and sneezing etiquette and clean hands webpage for more information.
- **Perform routine environmental cleaning:**
 - Routinely clean all frequently touched surfaces in the workplace, such as workstations, countertops, and doorknobs. Use the cleaning agents that are usually used in these areas and follow the directions on the label.
 - No additional disinfection beyond routine cleaning is recommended at this time.
 - Provide disposable wipes so that commonly used surfaces (for example, doorknobs, keyboards, remote controls, desks) can be wiped down by employees before each use.
- **Advise employees before traveling to take certain steps:**
 - Check the CDC's Traveler's Health Notices for the latest guidance and recommendations for each country to which you will travel. Specific travel information for travelers going to and returning from China, and information for aircrew, can be found at on the CDC website.
 - Advise employees to check themselves for symptoms of acute respiratory illness before starting travel and notify their supervisor and stay home if they are sick.
 - Ensure employees who become sick while traveling or on temporary assignment understand that they should notify their supervisor and should promptly call a healthcare provider for advice if needed.
 - If outside the United States, sick employees should follow your company's policy for obtaining medical care or contact a healthcare provider or overseas medical assistance company to assist them with finding an appropriate healthcare provider in that country. A U.S. consular officer can help locate healthcare services. However, U.S. embassies, consulates, and military facilities do not have the legal authority, capability, and resources to evacuate or give medicines, vaccines, or medical care to private U.S. citizens overseas.
- **Additional Measures in Response to Currently Occurring Sporadic Importations of the COVID-19:**
 - Employees who are well but who have a sick family member at home with COVID-19 should notify their supervisor and refer to CDC guidance for how to conduct a risk assessment of their potential exposure.

- 3
- If an employee is confirmed to have COVID-19, employers should inform fellow employees of their possible exposure to COVID-19 in the workplace but maintain confidentiality as required by the Americans with Disabilities Act (ADA). Employees exposed to a co-worker with confirmed COVID-19 should refer to CDC guidance for how to conduct a risk assessment of their potential exposure.

Planning for a Possible COVID-19 Outbreak in the US

The severity of illness or how many people will fall ill from COVID-19 is unknown at this time. If there is evidence of a COVID-19 outbreak in the U.S., employers should plan to be able to respond in a flexible way to varying levels of severity and be prepared to refine their business response plans as needed. For the general American public, such as workers in non-healthcare settings and where it is unlikely that work tasks create an increased risk of exposures to COVID-19, the immediate health risk from COVID-19 is considered low. The CDC and its partners will continue to monitor national and international data on the severity of illness caused by COVID-19, will disseminate the results of these ongoing surveillance assessments, and will make additional recommendations as needed.

Planning Considerations

All employers need to consider how best to decrease the spread of acute respiratory illness and lower the impact of COVID-19 in their workplace in the event of an outbreak in the US. They should identify and communicate their objectives, which may include one or more of the following: (a) reducing transmission among staff, (b) protecting people who are at higher risk for adverse health complications, (c) maintaining business operations, and (d) minimizing adverse effects on other entities in their supply chains. Some of the key considerations when making decisions on appropriate responses are:

- Disease severity (i.e., number of people who are sick, hospitalization and death rates) in the community where the business is located;
- Impact of disease on employees that are vulnerable and may be at higher risk for COVID-19 adverse health complications. Inform employees that some people may be at higher risk for severe illness, such as older adults and those with chronic medical conditions.
- Prepare for possible increased numbers of employee absences due to illness in employees and their family members, dismissals of early childhood programs and K-12 schools due to high levels of absenteeism or illness:
 - Employers should plan to monitor and respond to absenteeism at the workplace. Implement plans to continue your essential business functions in case you experience higher than usual absenteeism.
 - Cross-train personnel to perform essential functions so that the workplace is able to operate even if key staff members are absent.
 - Assess your essential functions and the reliance that others and the community have on your services or products. Be prepared to change your business practices if needed to maintain critical operations (e.g., identify alternative suppliers, prioritize customers, or temporarily suspend some of your operations if needed).
- Employers with more than one business location are encouraged to provide local managers with the authority to take appropriate actions outlined in their business infectious disease outbreak response plan based on the condition in each locality.
- Coordination with state [↗](#) and local [↗](#) health officials is strongly encouraged for all businesses so that timely and accurate information can guide appropriate responses in each location where their operations reside. Since the intensity of an outbreak may differ according to geographic location, local health officials will be issuing guidance specific to their communities.

Important Considerations for Creating an Infectious Disease Outbreak Response Plan

All employers should be ready to implement strategies to protect their workforce from COVID-19 while ensuring continuity of operations. During a COVID-19 outbreak, all sick employees should stay home and away from the workplace, respiratory etiquette and hand hygiene should be encouraged, and routine cleaning of commonly touched surfaces should be performed regularly.

Employers should:

- Ensure the plan is flexible and involve your employees in developing and reviewing your plan.
- Conduct a focused discussion or exercise using your plan, to find out ahead of time whether the plan has gaps or problems that need to be corrected.
- Share your plan with employees and explain what human resources policies, workplace and leave flexibilities, and pay and benefits will be available to them.
- Share best practices with other businesses in your communities (especially those in your supply chain), chambers of commerce, and associations to improve community response efforts.

Recommendations for an Infectious Disease Outbreak Response Plan:

- Identify possible work-related exposure and health risks to your employees. OSHA has more information on how to protect workers from potential exposures [to COVID-19](#).
- Review human resources policies to make sure that policies and practices are consistent with public health recommendations and are consistent with existing state and federal workplace laws (for more information on employer responsibilities, visit the Department of Labor's [website](#) and the Equal Employment Opportunity Commission's [website](#)).
- Explore whether you can establish policies and practices, such as flexible worksites (e.g., telecommuting) and flexible work hours (e.g., staggered shifts), to increase the physical distance among employees and between employees and others if state and local health authorities recommend the use of social distancing strategies. For employees who are able to telework, supervisors should encourage employees to telework instead of coming into the workplace until symptoms are completely resolved. Ensure that you have the information technology and infrastructure needed to support multiple employees who may be able to work from home.
- Identify essential business functions, essential jobs or roles, and critical elements within your supply chains (e.g., raw materials, suppliers, subcontractor services/products, and logistics) required to maintain business operations. Plan for how your business will operate if there is increasing absenteeism or these supply chains are interrupted.
- Set up authorities, triggers, and procedures for activating and terminating the company's infectious disease outbreak response plan, altering business operations (e.g., possibly changing or closing operations in affected areas), and transferring business knowledge to key employees. Work closely with your local health officials to identify these triggers.
- Plan to minimize exposure between employees and also between employees and the public, if public health officials call for social distancing.
- Establish a process to communicate information to employees and business partners on your infectious disease outbreak response plans and latest COVID-19 information. Anticipate employee fear, anxiety, rumors, and misinformation, and plan communications accordingly.
- In some communities, early childhood programs and K-12 schools may be dismissed, particularly if COVID-19 worsens. Determine how you will operate if absenteeism spikes from increases in sick employees, those who stay home to care for sick family members, and those who must stay home to watch their children if dismissed from

school. Businesses and other employers should prepare to institute flexible workplace and leave policies for these employees.

- Local conditions will influence the decisions that public health officials make regarding community-level strategies; employers should take the time now to learn about plans in place in each community where they have a business.
- If there is evidence of a COVID-19 outbreak in the US, consider canceling non-essential business travel to additional countries per [travel guidance](#) on the CDC website.
 - Travel restrictions may be enacted by other countries which may limit the ability of employees to return home if they become sick while on travel status.
 - Consider cancelling large work-related meetings or events.
- Engage state [↗](#) and local [↗](#) health departments to confirm channels of communication and methods for dissemination of local outbreak information.

DATE: March 6, 2020
TO: All CFCHS Employees
FROM: Maria Bledsoe, Chief Executive Officer

MEMORANDUM: CORONAVIRUS 2019 (COVID-19)

To ensure Central Florida Cares Health System, Inc. (CFCHS) provides a safe workplace, this includes taking precautionary steps to reduce exposure risk to Coronavirus-2019 (COVID-19), this memorandum will take effect immediately and remain in effect until repealed by the Chief Executive Officer (CEO) or Designee. These minimum guidelines are for addressing the potential risk of a COVID-19 infection in the workplace.

The world health community continues to monitor closely the emergence of coronavirus disease 2019 (COVID-19). Although the outbreak is not considered a pandemic, it is a Public Health Emergency. At this time, no one knows how severe this outbreak will be and given this uncertainty, we are taking proactive steps. First and foremost, we want to maintain a safe workplace and encourage practices protecting the health of employees. We ask all employees to cooperate in taking steps to reduce the transmission of communicable diseases in the workplace. Employees are reminded of the following:

- Stay home when you are sick.
- Wash your hands frequently with warm, soapy water for at least 20 seconds.
- Cover your mouth with tissues whenever you sneeze, and discard used tissues in the trash.
- Avoid people who are sick with respiratory symptoms.
- Clean frequently touched surfaces.

CFCHS has provided alcohol-based hand sanitizers for the office, as well as cleaning sprays and wipes to clean and disinfect frequently touched objects and surfaces.

An employee who exhibits symptoms of the virus should seek medical care. The health care professional will work with the state public health department and Centers for Disease Control and Prevention (CDC) to determine if they need to be tested for COVID-19.

CFCHS recommends that employees be cautious when traveling to regions with high COVID-19 infection rates during the outbreak. A list of these regions can be found on CDC's website at <https://www.cdc.gov>. Employees who choose to travel to such regions shall inform their Supervisor and Human Resources (HR) prior to travel, and contact HR upon return.

Employees who have recently traveled, specifically to regions with high COVID-19 infection rates, are highly encouraged to take preventive measures and get checked by a health care professional upon return. If experiencing symptoms within two weeks of travel, please obtain medical assistance and mention your recent travel. Additionally, notify HR immediately.

Employees returning from travel who do not exhibit virus-like symptoms must still contact HR upon return and may be directed to remain away from the workplace for one (1) week to determine whether or not they have been exposed. The returning employee should work with his/her Supervisor to set appropriate telecommuting arrangements to work from home. **PTO will not be affected during that one (1) week period.** At the end of the one (1) week, the employee, HR, and the Supervisor will discuss returning back to the office.

CFCHS will comply with all applicable statutes and regulations that protect the privacy of persons who have a communicable disease. Every effort will be made to ensure procedurally sufficient safeguards to maintain the personal confidence about persons who have communicable diseases.
